

CareVent®

Catheter vent with connection tube

CareVent® is a vent for bladder catheters that supports bladder voiding in a natural rhythm. Continuous draining - e.g. during sleep for undisturbed rest at night - is possible, but it doesn't have to be set as continuous. This allows for further training and support of the bladder muscles.

- **Light weight**
- **Unrestricted mobility**
- Can be used **with or without a urine collection bag**
- Bladder voiding **in a natural rhythm**
- **Self-activated closing** of the vent
- **Perfect seal** with the patented closure system
- **Prescribable medical aid**
