Esophageal Stent Delivery System

Proximal Release System

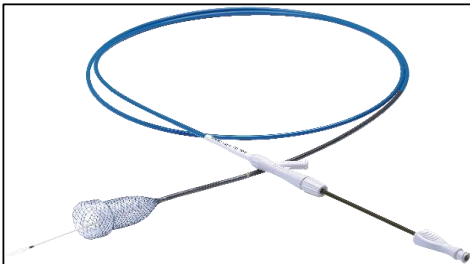

Accurate stent positioning

- proximal part is released earlier than its distal part to enable placement with consideration of the proximal tumor margin without fluoroscope
- recommended for upper esophageal strictures

Through The Scope (TTS) Delivery System

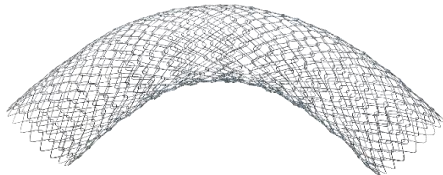

Easy and simple stenting through the scope channel

- preloaded in a 10.5 Fr delivery system for esophageal covered stents
- the practical solution for tight, narrow or tortuous anatomy

Colonic Stent* / Duodenal Stent

*Colonic Stent can be used as Duodenal Stent too, the only difference is the length of the delivery system
